

CONTEC Dynamo Cap "Dynamo Shell"

Description

The quick dynamo repair

An intact and reliable dynamo is the prerequisite for functioning bicycle lighting and thus for personal safety in road traffic. Especially with side rotor dynamos, there should therefore always be sufficient friction between the friction wheel and tire flank so that the bicycle light works effectively.

The CONTEC dynamo cap restores lost grip in worn friction wheels without having to replace the dynamo. The dynamo cap made of black PVC is provided with a grippy profile and is particularly abrasion-resistant. It can be easily pressed onto the dynamo wheel without tools and thus ensures the reliable functioning of the lighting system in all weather conditions. The CONTEC dynamo cap is compatible with the friction wheels of most side rotor dynamos and thus versatile.

The cap is ideal for quick as well as sustainable repair of bicycle lighting with side rotor dynamo and the perfect addition to any spare parts fund.
