

CONTEC Cassette "Grad.HT"

Description

The performance of your cassette is essential for the quality of your riding experience. That is why we make no compromises in our Grad.HT cassettes in terms of function and durability: The sprockets made of particularly tensile High Tensile steel are reinforced in the HT (= high torque) variant specifically for the high torques of e-bike mid-motors. You benefit from this, as it offers you higher mileage (and therefore longer maintenance intervals) as well as superior shifting performance for longer. Our Grad.HT cassettes have special climbing aids for the chain, which make each of your gear changes faster and smoother, so you do not have to think about shifting and can fully concentrate on riding. This cassette is suitable for 9-speed gears and has a gradation of 11-32 teeth.
