

CONTEC Derailleur cable outer casing "Shift"

Description

Precise Shifting with Chain and Hub Derailleurs

Whether you're riding an MTB, cyclocross bike, road bike, or touring bike—properly matched shifting components are what make riding truly enjoyable. Intact shifting cables and outer casings are essential for this. The CONTEC "Shift" shift cable housing, with a diameter of 4 mm, comes in a convenient box containing a 40-meter roll. The box fits neatly under a workbench or on a shelf to save space, and the housing can be easily pulled out and cut to the desired length—without any twisting.

The CONTEC "Shift" shift cable outer sleeve pairs perfectly with the CONTEC "Shift" Cable Cover. This simply slides onto the ends of the cut-to-length shift cable outer sleeve. The outer casing is coated with a durable and elastic plastic layer and, thanks to embedded wire strands running parallel to the cable's direction of travel, enables particularly precise shifting by preventing the outer casing from being compressed. The "Shift" shift cable outer casing is suitable for all derailleur and hub gear cables.
