CONTEC Light set "Strata 90"

Description

Whether you're cycling in shady woods, in the twilight of the evening or at night. As exciting as these moments make your ride, it is just as important to remain clearly visible to others and not be overlooked. So why not let the CONTEC Strata lead 90 light your way?

At dusk or in shady areas, the Strata lead 90 automatically switches its focus from the daytime running light to the driving light and enables optimum visibility. You can also use the color display on the front lights to determine the different brightness levels (level 1: 15 lux, level 2: 45 lux, level 3: 90 lux). This gives you clear and bright illumination of your near and far range. The front lights also have a battery charge level indicator so that you are never suddenly left in the dark without light.

Thanks to the universally adjustable Bracket, the front light can be mounted on all handlebar variants. The Bracket also has a rotating function that allows you to individually adjust the light. When you park your bike, you can quickly slide the battery-powered headlight out of the Holder so that you don't have to expose it to the risk of theft.

The Battery (2500mAh) is replaceable, has a USB-C connection and offers you up to 13.5 hours, 6.5 hours or 3.5 hours of luminosity, depending on the brightness level set.

The Set includes a Rear Light: The Strata Tail Stop has an integrated brake light function that makes the light shine brighter as soon as your bike rapidly loses speed. The additional emergency brake indicator also flashes quickly as soon as you brake very hard.

The rear lights have a sensor-controlled daytime running light, just like in modern cars. Because even when it is bright during the day, an additional light on your bike can ensure that other road users can keep an eye on you.

The Strata Tail Stop has a light duration of up to 9 hours and can be easily recharged via USB-C. With the universally adjustable bracket, you can attach the rear lights to your Carrier, Seatposts or even your Backpacks, for example.

When developing the battery-powered lighting collection, it simply made sense that not only their appearance but also their functions should be compatible with each other. The Strata lead 90 therefore has a so-called Connect function, which allows you to control the Strata Tail Stop rear lights at the same time. When you switch on the Front Light, the rear lights also switch on.
