

AXA Rear Light "Juno"

Description

Juno" LED Rear Light from AXA

To make sure you can be seen in all visibility and light conditions when you're out and about on your bike, there's no way around a bright rear light. The compact AXA "Juno" is a rear light that is suitable for Hub or side dynamos. With its parking light function, it not only lights up when you're biking, but also when you come to a stop at a dark intersection or push your bike into the dark garage so that you can make your way back through the dark - without the need for flashlights.

Thanks to its intelligent design, the "Juno" also makes you visible from the side. With the AXA rear light, you are easy to see in traffic when cars or other cyclists approach from behind or when you are approaching an intersection that you are crossing.

As the AXA Rear Light has a generous light cone, you will be noticed from a distance of around 500m. The integrated reflector also helps to further increase your visibility. The Rear Light can be mounted at a distance of 50 or 80 mm. The material for this is included in the scope of delivery.
