FAHRER Battery Protection "Cover Tube"

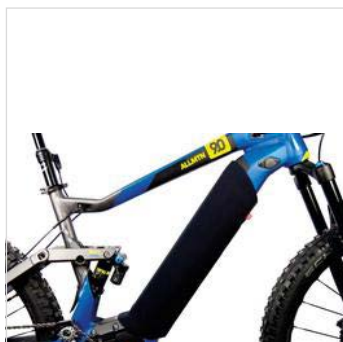

Description

Cover Tube

The universal protection for e-bikes with an integrated down tube battery: In winter, the "Battery Cover" from FAHRER BERLIN helps to keep the batteries integrated in the frame down tube at operating temperature and keep them running for longer. The all-round protection made of 3 to 3.5 mm thick neoprene also protects the down tube from dirt and stone chips.

The cover is simply fastened around the down tube with the Velcro fastener and the stretchy material adapts well to the shape. It is also suitable as a cover for the down tube when the Battery is removed and keeps dirt and moisture away from the contacts.
