

AXA Front Light "Blueline 30T"

Description

Good illumination & daytime running light

The "Blueline 30T" from AXA is a compact and sporty dynamo-powered Front Light. With a light intensity of 30 lux, it provides a light cone with which you can see 60 m and can be seen over a distance of 3.5 km.

The lights offer a combination of an integrated reflector and optimum light distribution. Both together increase safety so that you are better seen by other road users and the road ahead is well lit.

The "Blueline 30T" is also equipped with daytime running lights. The Front Light is also available with an optional automatic light/dark sensor and a parking light function. This function allows you to use the light for up to 4 minutes even when stationary.

The robust Holder of this Front Light is suitable for all types of roads. However, the Holder can also be removed or adapted to pre-installed brackets so that the lights can be used flexibly.
