CONTEC System Pedal "Talon"

Description

MTB system pedal "Talon"

More control through a fixed connection: the CONTEC "Talon" is a system pedal for MTBs and trail courses. Because you can easily click into the pedal from both sides, you can otherwise fully concentrate on the terrain and the track in front of you. The click in and out has been simplified with this pedal with some tricks. On the one hand, there is the EasyIO entry aid with +12°, on the other hand, the release hardness can be adjusted so that you can always quickly put your foot on the ground. You gain more control through the large contact area. Since the pedal is designed overall open, dirt and mud can settle badly. Therefore, the "Talon" is always ready for many laps on the trail.
